Accelerate Change and Integration on IBM i with Midrange Dynamics

MDChange includes everything your business needs to modify, install, and distribute software changes across multiple IBM i and non-IBM i systems.

Development teams can make application updates faster and with greater flexibility. Work in any IDE, including VS Code, quickly identify what needs to be changed, move changes through the QA process, and deploy IBM i development, Java, PHP, and other programs in the same package to the IFS or to other servers. We make changes as easy and as risk-free as possible for your developers.

Midrange Dynamics's tightly integrated and reasonably priced product line focuses on change management, application analysis, development, and software distribution. Recognized for ease of use and reliability, the solutions dramatically reduce the time and risk involved in understanding, changing, and migrating application objects.

Increase Automation, Reduce Risk

FEATURES & FUNCTIONS

MDChange (MDCMS, MDXREF, and MDOpen)

- Manage DevOps through project workflow
- Analysis and cross referencing
- Role-based security
- Work in any IDE, quickly identify what needs to be deployed, and move smoothly through the automated deployment process, which includes automatic rollback
- Manage native IBM i source through MDChange source versioning or utilize the IFS, Git, or SVN
- Use branch/trunk logic in MDChange to accelerate concurrent project development
- "Smart Sort" for flawless SQL compiles and bound object builds
- Cross-application conflict management
- Sophisticated deployment and rollback for native IBM i and cross-platform implementations
- Installation management
- Audit management / Sarbanes-Oxley (SOX) compliance
- Understand your environment by viewing dependency and binding information for your objects.
- View detail down to the field information and usage, making field expansion projects feasible.
- Sophisticated SQL management
- Track dependencies and relationships for languages that cross platforms such as Java, PHP, C# (.net), Python, etc.

MDWorkflow - Orchestra and Integrate CI/CD Pipelines

Implement DevOps and build CI/CD pipelines within your organization. MDWorkflow allows you to centrally manage projects, tasks, object deployment, and structured workflow across all systems. It facilitates team collaboration and ensures a documented and well communicated software development process. MDWorkflow interfaces with tools such as Jira, ServiceNow, and Azure.

MDTransform – Manage Database File Changes and Data Transformation

Automate managing field expansions, initializing new fields, merging fields, and managing deployment of DDS to DDL conversions. MDTransform also handles field type changes and guides users through the steps to add and populate new fields or update field content. Build and refresh test data, mask data, and manage field encryption.

MDRapid – Reduce Database Downtime from Hours to Seconds

MDRapid uses MDTransform to convert and migrate data to new file formats while applications are still in use. When new versions of the files are ready to roll, MDRapid moves them into production in seconds. Business applications continue to access databases as usual while upgrades are taking place, protecting your business from extended downtime.

MDRest4i – Create Lightning Quick APIs with RPGLE

Use your database knowledge and RPG skills to generate powerful APIs with 90% less coding. As an IBM i application expert, you can enforce your business rules without having to rely on middleware, code abstractions, or connectivity drivers.

Legacy CMS Replacement

Moving from legacy products such as TurnOver, Implementer, ARCAD, and Rocket Aldon is fast and efficient. Test and rollback a migration as many times as you like with no risk to existing applications. Migrate one or all applications at once. Transitioning work in progress is seamless.
